Drawing on its expertise and knoweledge in the sector, Disano has developed the LED version of its Minicomfort ceiling fixture. The LED version shares the same basic features of the other options with the addition of the advantages of LED lighting, such as quality output, energy savings and longer life. Such features can only be applied to luminaires with a high level of design and construction. Minicomfort LED is the ideal luminaire for offices, healthcare facilities and for all spaces that require controlled lighting with deal light better units and that must be complexible and construction.

facilities and for all spaces that require controlled lighting with dark light optics and that must comply with glare regulations. Minicomfort is easy to install on ceilings, thanks also to the accessories designed to simplify installation. Its shape ensures uniform light distribution: white LEDs (4000K) generate high quality lighting ensuring maximum visual comfort and perfect colour rendering (CRI<80/90). Compared with the most common T8 fluorescent lamps, the particular opticides more thear 40% compared to 4/18

w ceiling lights with lamellar optics. The savings are even more significant considering the long life of the LEDs and the absence of maintenance once the fixture is installed. In addition to the practical advantages, the excellent aesthetic

result is certainly not to be underestimated: equipped with a quick connector there is no need to open the fixture. It's a simple and innovative solution for having the latest

technology in interior lighting.
