### Code: 330803-39

Disano's new products fully meet the primary objectives of modern lighting systems in urban spaces and smart cities, which require to improve energy efficiency and decrease

running costs. With a long lifespan and extremely low maintenance requirements, Disano luminaires can guarantee these results in both its new products and in its upgraded ones.

both its new products and in its upgraded ones. Investing in technologically advanced lighting products means improving the quality of our life and contributes to creating a more sustainable society. The Sella range of street lighting fixtures, made with the best Italian design, was manufactured with this in mind. Designed to fit the new light sources and for the latest light management and control systems.

Its die-cast aluminium housing is equipped with specially designed cooling fins for heat dissipation that allow the LEDs to

work in the best way possible. The many different light distributions best meet the requirements imposed by urban lighting regulations and allow designers to find the perfect solution for any given space. Sella is equipped with a special control system that

automatically reduces the current in the event of an abnormal temperature rise, and is also equipped with a protection rating in accordance with EN 60598-1 standards to protect the LED module against electrostatic overvoltage. Moreover, its EN 61547 surge protector is designed to protect

The Sella range also features an optical system in aluminum,

silver-coated powder (99.99%) using physical vapour deposition (PVD), guaranteeing perfect lighting performance over time. The modularity of the optical design, the special solutions adopted for the electronic circuits and the control of the working temperatures of the electronic components make this family a professional, flexible and reliable product, capable of guaranteeing enormous application benefits in the various

The possibility to choose the LED driving current allows the right amount of power to be available for specific project conditions

The whole range can be equipped with adjustable dimming and a stand-alone system that reduces the luminous flux during the niaht.

Each individual luminaire can be monitored through a technologically advanced control, management and diagnostic unit via a powerline remote control or wireless systems.

Please contact the Consulting and Design Centre for any technical information. The reported luminous flux is the flux emitted by the light source with a tolerance of ± 10% compared to the indicated value. The total wattage absorbed by the system will not exceed 10% of the reported value. Technical lighting data may be subject to changes and improvements due to the fast evolution of the technology.
